## A Refreshing Oasis

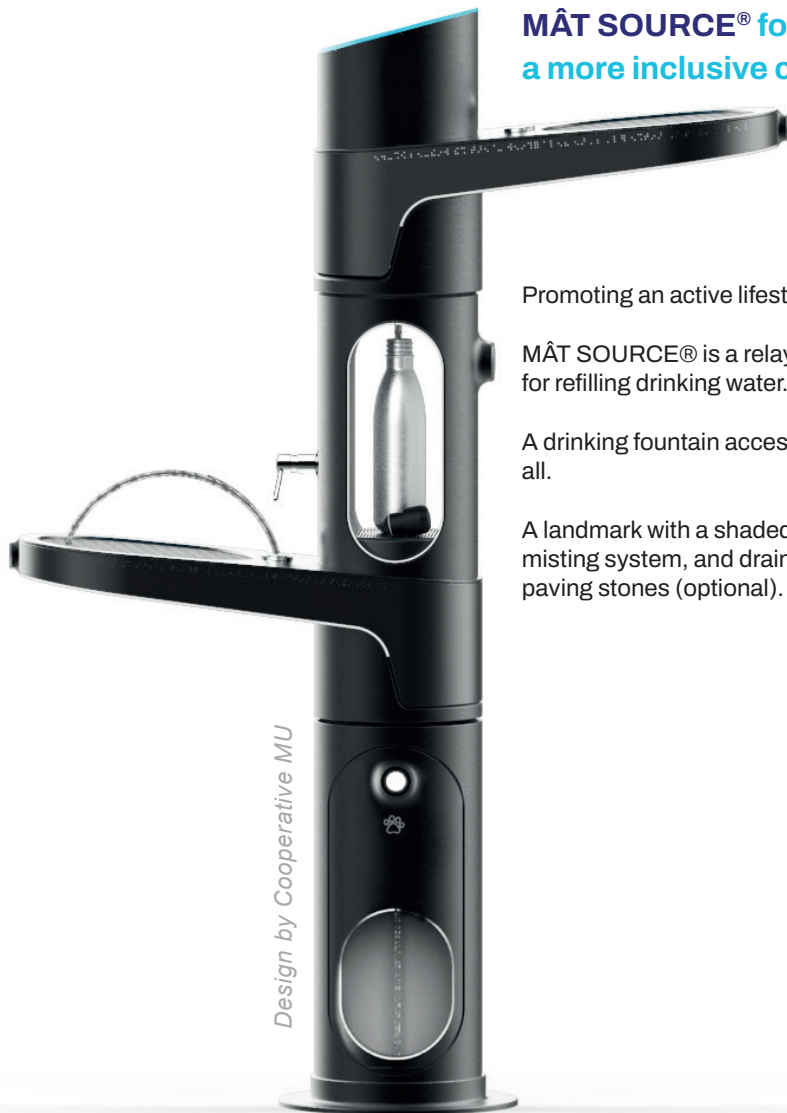

The universal modular fountain

MÂ SOURCE®

An eco-designed oasis of freshness based on universal design principles with the dual objectives of comfort and efficiency.

**MÂT SOURCE®** focuses on the well-being of its users and creates a more inclusive city.

Design by Cooperative MU

Promoting an active lifestyle.

MÂT SOURCE® is a relay point for refilling drinking water.

A drinking fountain accessible to all.

A landmark with a shaded area, misting system, and draining shell paving stones (optional).

### MODULAR AND MULTI-PURPOSE

From 1 to 4 stackable modules to enhance the fountain.

### AUTONOMOUS

No external power source is required for operation.

### REMOTE CONNECTED

**MADE IN FRANCE**

## ECO-FRIENDLY

**MÂ SOURCE®** is part of a sustainable development and ecodesign approach in Collaboration with MU Cooperative.

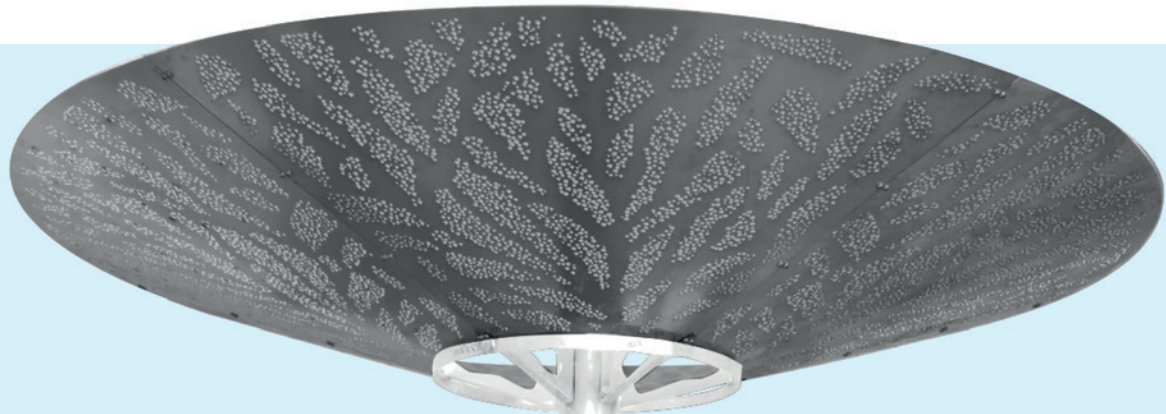

- Eco-designed
- Timed push button
- Drainage shell pavers
- Remote water resource management

MODULE 3

### THE SHADE

Shadow cast on the ground, up to 7 meters in circumference

MODULE 2

### THE MAST

**Misting system**  
low consumption

**Push buttons**  
accessible to all

Understanding of use graphically induced.

Integration of Braille

MODULE 1

### THE BASE

2 drinking water sources

**Bottle filling**  
with positioning assistance

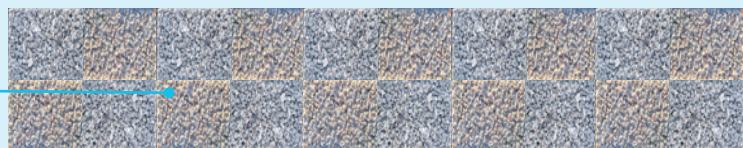

**Pet access**  
(optional)

MODULE 0

### DRAINING SHELL PAVING STONES

**Water Connect** is an innovative company whose mission is to transform urban spaces into true oases of freshness and well-being.

**Water Connect** develops products that address issues such as the increasing number of heat waves and climate change, which place additional pressure on water availability in cities, where public spaces are generally highly mineralized. The idea is to help combat urban heat islands.

As a member of the Water, Environment and Soil Cluster, WaterConnect aims to be part of urban planning and sustainable development to promote the emergence of urban projects that integrate social, economic, and environmental issues, optimizing the economical use of resources (energy, water, etc.).
